

Informatica PowerCenter to IDMC Migration

Business Challenge

Business-critical finance and accounting using a legacy on-premise data integration platform lacked the ability to integrate with modernized operational systems which created operating inefficiencies and business risk.

Solution

A modernized and expandable financial data ecosystem: to support future operational and strategic data integration needs.

A modern cloud-based data integration platform: that provides a variety of features such as business data integration, application integration, and API management between cloud and local applications.

Approach

- **Thorough Assessment:** Discovery and alignment of business goals & constraints with technical processes and assets.
- **Optimize Migration Process:** Created a “lift – selectively improve and/or shift – test” production data migration process
- **Leverage Process Efficiencies:** Identified and leveraged opportunities for automation, acceleration, and efficiencies in the migration and testing phases.

Business Value

- **Operating efficiencies and improved cashflow** from by utilizing more modern and feature-rich cloud applications
- **Reduced cashflow risk** being caused by business process interruption due to aging technology
- **Reduced Operating Costs** by eliminating resources required to perform system administration and upgrades
- **New financial process enablement** using new capabilities and efficiencies only offered by modern cloud technologies
