

Informatica PowerCenter to IDMC Workflow Migration

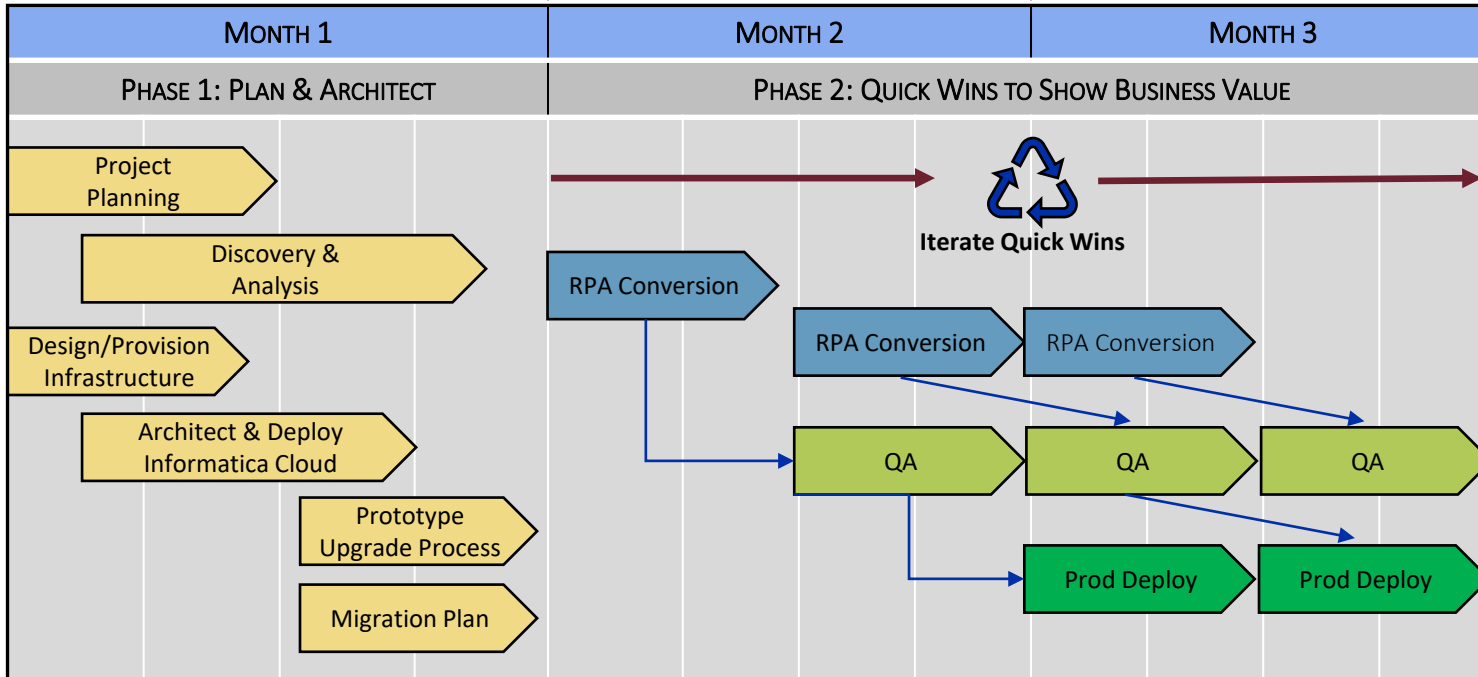

Business Challenge

Reduce operating costs and enable new functionality by migrating PowerCenter assets and workflows to IDMC. Sponsor must demonstrate business value quickly to assure continued investment in cloud migration.

Solution

A modernized and expandable financial data ecosystem: to support future operational and strategic data integration needs.

A modern cloud-based data integration platform: that provides a variety of features such as business data integration, application integration, and API management between cloud and local applications.

Phase 1 Deliverables

Informatica IDMC Online
Migration Prototype/POC Completed

Phase 2 Deliverables

Quick win deliverables in production
90 PowerCenter workflows migrated to IDMC dev, QA, & prod

Approach

- **Thorough Assessment:** Discovery and alignment of business goals & constraints with technical processes and assets.
- **Optimize Migration Process:** Created a “lift – selectively improve and/or shift – test” production data migration process
- **Leverage Process Efficiencies:** Identified and leveraged opportunities for automation, acceleration, and efficiencies in the migration and testing phases.

Business Value

- **Reduced Operating Costs** by eliminating resources required to perform system administration and upgrades
- **Minimized initial financial investment and risk** by “starting small” and rationalizing workflows
- **Achieved quick wins** by migrating 90 PowerCenter workflows and ~200 associated mappings to IDMC.
